

All On Implants

What is AOI

All on Implants also known as All on Four is an immediate replacement option for denture wearers or for those who have compromised oral health. All on Implants is a fast and reliable option for a smile makeover and a functional replacement of all teeth in as little as 24-48 hours*. It is achieved by removing all existing teeth, placing a minimum of four titanium dental implants on each arch, followed by placement of a fixed, custom-made dental prosthetic bridge made from PMMA, acrylic, acrylic with titanium bar or zirconia.

How does All on Implants work?

The procedure consists of the precise placement of titanium implants, which are inserted into the jawbone to form a foundation for the prosthetic replacement. Post-procedure, the implants are immediately restored and completed with a temporary acrylic prosthetic bridge. In many cases, the bridge only needs to be supported by four dental implants, but in some instances, extra implants may be needed to allow better retention of the AOI bridge.

What are the benefits of AOI

All on Implants offers numerous advantages over traditional tooth replacements, including increased stability, improved chewing function, and a more natural appearance. They can also be placed in patients who are ineligible for conventional implants due to insufficient bone density. All on Implants improves the quality of the life of people with permanent and fixed teeth replacements.

Aftercare for AOI

Bruising and swelling can occur post-procedure and peak on day 4. This is no different from any other surgery and usually subsides within one and a half weeks. Spitting and rinsing too vigorously for the first 24-48 hrs is to be avoided. No touching and playing with the surgical site. Other things to expect include.

- Sore jaw muscle
- Sore throat
- Cracked lips
- Dry mouth
- Numb sensation
